

ThinkTankIQ™ FEDS-SGARD™ Secure Client Workstations

ThinkTankI FEDS-SGARD 1

Small Form Factor "Tiny Tower"
With Intel Core i5-2300K 2.8GHz CPU

ThinkCP P/N#: TFS-SGARD001

ThinkTankI FEDS-SGARD 2

Mid-Tower/ATX Chassis
With Intel Core i7-2600K 3.4GHz CPU

ThinkCP P/N#: TFS-SGARD002

ThinkTankI FEDS-SGARD 3

4U Rackmountable Tower
With 2 Intel Xeon X5600 2.8GHz CPUs

ThinkCP P/N#: TFS-SGARD003

Overview

There is an essential rule that most security experts tend to agree with -

"As an infrastructure grows in complexity - the less secure it becomes."

Think FEDS-SGARD Secure Client Workstations -
Designed to Assist I.T. Managers in Protecting The Enterprise
from Client Vulnerabilities

- **S**ecures Client Authentication via Smart Card Reader (Token Authentication)
- **G**uards Assets by Enhancing Protection of Intellectual Property and Customer Data Files
- **A**ccess Restrictions Controlled by Physical Barriers Help Enforce Organizational Policies
- **R**educes Risk of Exposure to Malicious Code
- **D**eters Data Theft & File Corruption

Events over the last several years indicate that "Malicious Insider" attacks are on the up rise and have been at the root cause of some of the broadest security breaches in history. A "Malicious Insider Attack" may not always be intentional

either. For example, one case is known in which a large public institution suffered losses to due a worm infection that virulently attacked their entire enterprise infrastructure. The "carrier" in this case was a user who did not realize that their personal USB flash drive was infected. Maybe they were just trying to print out some family pictures at work, even though the organization had an official office policy against using personal USB drives on work computers.

The Think FEDS-SGARD Secure Workstations provide practical security measures to help protect against "Malicious Insider" attacks by reducing common vulnerabilities within client-network workstations. All ports and points of access outside the network are effectively blocked, while data maintained within the system - or outside the system - is encrypted in a reliable encryption format.

Integrated Security Features

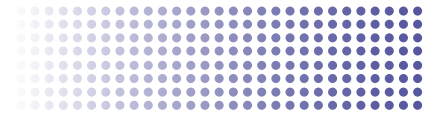

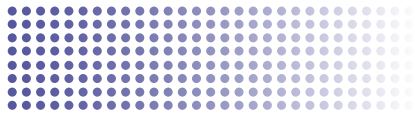

- FIPS 140-2 Encrypted Data Protection
- USB Port Blocks & Device Port Interlocks
- Smart Card Reader for Enhanced Client Authentication (Optional)
- External FIPS 140-2 Encrypted Hard Drive (Optional)
- Enclosure "Anchor Locking" and Tamper Seals
