

Fire-n-Ice Drive Named Best of Category in PEI Magazine's 2002 Cool² Awards

Think Computer Products announced that their Fire-n-Ice Portable Pocket hard drive has received the PEI Magazine Cool² 2002 Award for the 'most desirable imaging product of the year,' in the category of Portable Storage.

According to PEI (Photo Electronic Imaging) Magazine, a team of technical advisers with expertise in a wide variety of imaging areas, nominated their favorite new products, based on several factors including quality, innovation, improvement, ease of use, and broadness of scope. PEI's editors and contributing editors then cast their votes in determining the winning products. This year, PEI presented 38 awards in 8 categories representing the full spectrum of imaging products ranging from digital cameras and color management tools to graphic tablets and software.

The Fire-n-Ice Portable drives earning the best of portable storage annual award feature FireWire connectivity in capacities of 20Gb, 30Gb, 40Gb and 60Gb. Think also provides portable Fire-n-Ice drives in a slightly larger format in 40Gb, 60Gb, 80Gb, 100Gb, 120Gb, 160Gb, 200Gb capacities, with a 250Gb capacity coming soon. Think Computer Products Helps Kevin Costner Make Movies?

Irvine, CA, February, 2003 $\text{\textcircled{D}}$ Think Computer Products recently discovered that one of its customers, Ear Candy, LLC is handling the post-sound production for the upcoming Kevin Costner Movie Open Range, which is due to be released in the Fall of 2003. So, indirectly, Think is helping Kevin Costner; too bad Kevin doesn't know it.

Ear Candy, LLC utilizes Think Computer Products Storage equipment, including integrated StorCase Technology solutions in their post-production studios. The principals and crew of Ear Candy, LLC are credited with sound production work for many well known movies such as Black Hawk Down, Independence Day, The Patriot, Scooby Doo, John Q, Windtalkers, Blue Crush, Scary Movie 2, The Perfect Storm, Avenging Angelo, Rollerball (2002) and a slew of hundreds of other movies that puts these guys right in the center of the El limelight. They must be doing something right to keep a plate so full, and part of the right mix is working with Think Computer Products for their computing power (of course, we would say something like that, now wouldn't we?)

Perry D. Robertson, President of Ear Candy, LLC turned us on to some behind the scene facts. Computing wise, they work on built Apple Workstations using DigiDesign ProTools software. NLS storage is contained by their fully configured and upgradeable StorCase Technology InfoStations. In general, an average length film like Open Range takes five full time sound engineers, each one using two 72 Gigabyte hard drives translating into working storage of close to 720Gb per flick. Keep in mind this is just the sound for the movies we're watching. Think of the storage required for video, animation and special effects scenery for a 90 minute movie! We're into major terabytes guys.

Thank you Perry for the insight - now all of your competitors are going to try and finagle business from your producers , and all of our competitors are going to attack your account. For more information on Ear Candy, LLC visit <http://www.earcandypost.com>

ThinkTank IQ Servers & Workstations

Think Computer Products Is Proud to Announce The Latest Addition to Our
